

Courses that will satisfy the revised Applied Physics and Engineering Track for the Physics major

Last update: June 1, 2021

Contact person: Owen Long (owen.long@ucr.edu)

The Applied Physics and Engineering Track for the B.S. degree for the Physics major requires the following:

1. Additional upper- and lower-division requirements (16 units).
 - a) 16 units of approved Engineering electives including a minimum of 8 units at the upper-division level.

The courses listed below are all approved for the track. Courses not listed may be approved by a physics faculty academic advisor.

For some classes, important engineering prerequisites are listed so that you are aware of them when creating your course plans. Some courses allow “consent of instructor” in place of the course prerequisites. You are strongly encouraged to plan a complete 16+-unit sequence of courses for the track before you commit to the track. Make sure that it’s possible to complete all of the courses before your planned graduation date. *Always check the current catalog as things may have changed since the last update of this list.*

Computer Science, lower division

Note that almost all upper-division courses will require you to take CS 010A, CS 010B, and CS 010C, which is a total of 12 units. You will still need to take at least 8 units of upper-division CS courses. If you take CS 009P instead of CS 010A, you may not be able to take any other CS courses, since you can’t get credit for CS 010A after taking CS 009P.

CS 010A Introduction to computer science for science, mathematics, and eng. I (4, *Note that this is a general degree requirement for the physics major, so these 4 units do not count toward the 16 required units for the Applied Physics and Engineering Track*)

CS 010B Introduction to computer science for science, mathematics, and eng. II (4, *CS 010A*)
